

## ET-575 - Introduction to C++ - Homework

---

1. Request a first and last name from the console.  
Store each into a separate string variable.

Output the contents of both variables to the console three times:

- 1) separated by a space
- 2) separated by a tab
- 3) separated by a line

The program must **precisely** match the example output for credit.

Example Output (input in **bold italics**)

Input your first name: ***John***  
Input your last name: ***Smith***

John Smith  
John   Smith  
John  
Smith

2. Use *iomanip* library column format commands to create a program which outputs the content in the example below.

The program must **precisely** match the example output for credit.

Example Output

Shopping Cart

-----		
#	Item	Cost
1	Chalupa	\$1.50
2	Soft Taco Supreme	\$1.00
1	Meximelt	\$2.50
	Subtotal:	\$5.00
